Greenleaf Patient Process

Why does Greenleaf require a referral for you to be authorized medical cannabis?

College of Physicians and Surgeons of British Columbia - Practice Standard
Cannabis for Medical Purposes

Physicians who choose to provide a document related to the authorization of cannabis for medical purposes shall not complete a document for the authorization of cannabis for medical purposes for a patient unless the physician:

- A. Has a longitudinal treating relationship with the patient, or
- B. Is in direct communication with another physician or nurse practitioner who has a longitudinal treating relationship with the patient and both are in well-documented agreement with the issuance of a document for the authorization of cannabis for medical purposes

How to Choose a Licensed Seller

Do Your Research

There are over 350 companies licensed by Health Canada under the Cannabis Regulations to choose from.

Pricing

Some may offer discounts, such as compassionate pricing. If you qualify for such discounts, choose a producer who offers them.

Product Selection

Choose a Licensed Seller that offers the products you need and want.

Feeling Overwhelmed?

Schedule an appointment with a Greenleaf physician and educator for a customized treatment plan.

Employer

- Some Canadian employers and unions offer coverage

Veterans Affairs

- DVA offers reimbursement for medical cannabis

Income Tax Credit

- The Canada Revenue Agency (CRA) recognizes the costs of medical cannabis and some vaporizers as an eligible medical expense.

Licensed Producers

- Many offer special pricing for individuals receiving federal or provincial social assistance.

Health Care Spending Account

- It may be covered under a Health Care Spending Account

Coverage of Medical Cannabis

Medical Cannabis Insurance

Contact your insurance provider for specific details regarding medical cannabis.

Review Article
Practical considerations in medical cannabis administration and dosing
 Caroline A. MacCallum^{a,*}, Ethan B. Russo^b
^a Faculty of Medicine, University of British Columbia, BC, Canada
^b International Cannabis and Cannabinoid Institute, Phoenix, Czech Republic

The following **10 recommendations** suggest ways to use cannabis more safely, based on the best available scientific evidence.

- 1** Remember that every form of cannabis use poses risks to your health. **The only way to completely avoid these risks is by choosing not to use cannabis.** If you decide to use cannabis, follow these recommendations to lower risks to your health.
 - 2** The earlier in life you begin using cannabis, the higher your risk of serious health problems. Teenagers, particularly those younger than 16, should delay using cannabis for as long as possible. **You'll lower your risk of cannabis-related health problems if you choose to start using cannabis later in life.**
 - 3** Higher-strength or more powerful cannabis products are worse for your health. If you use products with high tetrahydrocannabinol (THC) content, the main mind-altering ingredient in cannabis, you're more likely to develop severe problems, such as dependence or mental health problems. Cannabidiol (CBD), another cannabis ingredient, can counteract some of THC's psychoactive effects. **If you use, choose low-strength products, such as those with a lower THC content or a higher ratio of CBD to THC.**
 - 4** Don't use synthetic cannabis products. Compared with natural cannabis products, most synthetic cannabis products are stronger and more dangerous. K2 and Spice are examples of synthetic cannabis products. Using these can lead to severe health problems, such as seizures, irregular heartbeat, hallucinations and in rare cases, death.
 - 5** Smoking cannabis (for example, smoking a joint) is the most harmful way of using cannabis because it directly affects your lungs. There are safer, non-smoking options like vaping or taking edibles that are better for your lungs. Keep in mind that these alternatives aren't risk-free either.
 - 6** If you choose to smoke cannabis, avoid inhaling deeply or holding your breath. These practices increase the amount of toxins absorbed by your lungs and the rest of your body, and can lead to lung problems.
 - 7** The more frequently you use cannabis, the more likely you are to develop health problems, especially if you use on a daily or near-daily basis. Limiting your cannabis use to occasional use at most, such as only using once a week or on weekends, is a good way to reduce your health risks. **Try to limit your use as much as possible.**
 - 8** Cannabis use impairs your ability to drive a car or operate other machinery. **Don't engage in these activities after using cannabis, or while you still feel affected by cannabis in any way.** These effects typically last at least six hours, but could be longer, depending on the person and the product used. Using cannabis and alcohol together further increases your impairment. Avoid this combination before driving or operating machinery.
 - 9** Some people are more likely to develop problems from cannabis use. **Specifically, people with a personal or family history of psychosis or substance use problems, and pregnant women should not use cannabis at all.**
 - 10** Avoid combining any of the risky behaviors described above. The more risks you take, the greater the chances of harming your health as a result of cannabis use.
- Please note: These recommendations are aimed mainly at non-medical cannabis use.

PATIENT GUIDE TO MEDICAL CANNABIS

Greenleaf MEDICAL CLINIC
Dosing Log
 Keeping a log of your doses can help determine how effective they are, and what the right dose is for you.

Date	Time	Strain Name	Smoke (mg / ml)	THC/CBD %	Dose (g / ml)	Count of Effect (low, med)	Duration of Effect (hr)	Symptoms Improvement % (using various methods from Patient Information)	Side Effects & Notes
